Electronic METRONA smart water meter

Dear Tenant,

In future, the electronic METRONA smart water meter will record your water consumption. The installation of metering devices is a legal requirement to enable consumption-based billing to be carried out. This creates opportunities for energy efficiency and helps to identify potential savings, because water is a vital resource!

Water meters are calibrated devices that measure the absolute water consumption per household, thus enabling consumption-based billing in accordance with the Operating Costs Ordinance. This applies to both cold and hot water meters. These are distinguished by their colour coding (cold water = blue, hot water = red).

The consumption values and meter data are transmitted via radio. The smart water meter is approved in accordance with the European Measuring Instruments Directive 2014/32/EU (MID) and 2014/30/EU (EMC).

The device is sealed and detects and records all attempts at tampering.

Electronic METRONA

smart water meter

Important technical data:

- Multi-beam measurement principle
- Magnetic impeller scanning
- 868 MHz radio module
- Storage of mid-month and end-of-month values
- Operating life: 6 years

(1) Touch sensor

Reading and displays on the LC display:

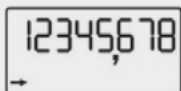

The display automatically switches to energy-optimised sleep mode. You can activate it using the touch sensor (1).

By pressing the touch sensor, the following values can be displayed one after the other:

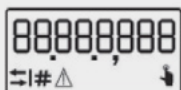

Button actuation display/ Display activation

The display is activated by touching the touch sensor (1); the hand icon is then shown on the display.

Current consumption value

The current consumption/meter reading in m³. On the cut-off date, this value is saved as the previous year's value. This value is used for an interim reading at the relevant point in time.

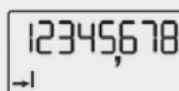

Segment test

Here all segments flash briefly. This allows you to check whether all segments of the display are working properly.

Cut-off date

The date of the last cut-off date is displayed here. The consumption value for your annual bill was saved on this date.

Consumption value on the last cut-off date

Here you will find the consumption value in m³ that was used to prepare your annual bill.

Device number

The 8-digit device number of the water meter is displayed.

The smart water meter is resistant to interference. It also continuously monitors its own function. In the event of a serious error, the water meter will stop taking measurements.

If a device is defective, please notify the Gewobag Service Centre immediately.
