Electronic METRONA water meter smart

Dear tenant,

in future, the electronic METRONA water meter smart will record your water consumption. The installation of metering devices is a legal obligation to facilitate consumption-based billing. This provides opportunities for energy efficiency and serves to identify saving opportunities, since water is a vital resource!

Water meters are calibrated devices which measure the absolute water consumption per user and thereby enable consumption-based billing according to the Operating Cost Ordinance. This applies to both cold and hot water meters. These are distinguished by their colour marking (cold water = blue, hot water = red).

Consumption values and meter data are transmitted by radio. The smart water meter is approved according to the European Measuring Instruments Directive 2014/32/EU (MID) and 2014/30/EU (EMC).

The device is sealed and recognises as well as stores all tampering attempts.

Electronic METRONA water meter smart

Important technical data:

- Multibeam measuring principle
- Magnetic impeller scanning
- 868 MHz radio module
- Storage of monthly mid and end values
- Service life: 5 years

(1) touch sensor

Reading and notices in the LC display:

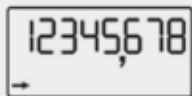

The display automatically switches to the energy-optimised sleep mode. You can activate it using the touch sensor (1).

By pressing the touch sensor, the following values can be displayed in succession:

Display button operation/ display activation

The display is activated by operating the touch sensor (1); The hand symbol is shown in the display.

Current consumption value

The current consumption/meter reading in m³. On the reporting date, this value is stored as the value from the previous year. This value is used at the relevant time for an intermediate reading.

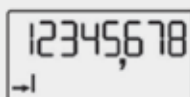

Segment test

All segments flash briefly. This allows you to verify that all display segments are working properly.

Reporting date

The last reporting date is displayed. The consumption value for your annual bill was stored on this date.

Consumption value on the last reporting date

Here you will find the consumption value in m³ which is used to create your annual bill.

Device number

The 8-digit device number of the water meter is displayed.

The water meter smart is interference resistant. In addition, it constantly monitors its own function. In the event of a serious error, the water meter will stop operating.

In the event of a device fault, please contact the Gewobag Service Centre immediately.
